The net amount of equity included in the Company's financial statements from limited liability investment partnerships and similar investments, regarded as marketable securities under Article 2-2 of the Financial Investment and Exchange Law of Japan, is calculated based on the relevant financial statements for the partnership available as of the reporting date stipulated in the partnership agreement.

c. Derivatives

Derivatives are stated at fair market value.

d. Inventories

Inventories are stated at cost, cost being determined mainly by the gross-average method (or at the net realizable value (NRV) calculated by writing down the book value to reflect a decrease in the NRV).

Work in process is also stated at cost, cost being determined by the specific identification method (or at the NRV calculated by writing down the book value to reflect a decrease in the NRV).

② Depreciation and amortization for important assets

a. Property, plant and equipment (excluding lease assets):

Depreciation is calculated primarily using the straight-line method.

Range of useful life for the assets is as follows:

Buildings and Structures: 2-50 years

Machinery, equipment and vehicles: 2-16 years

a. Allowance for doubtful accounts

Allowance for doubtful accounts is provided in the amount sufficient to cover possible losses based on a historical write-off of general receivables. Receivables with default possibility and bankrupt receivables are calculated based on an individual assessment of the possibility of collection.

b. Provision for bonuses

The estimated amount of bonuses was recorded to meet the payment of employee bonuses, an amount corresponding to the current fiscal year.

c. Provision for directors' bonuses

The estimated amount of bonuses was recorded to meet the payment of Directors and Audit & Supervisory Board Members bonuses, an amount corresponding to the current fiscal year.

b. Treatment of actuarial gains and losses and prior service costs

Prior service costs are amortized equally over a certain number of years (10 years in principle) within the average remaining years of service for the employees at the time of accrual, or are charged to income collectively at the time of accrual. Actuarial gains and losses are amortized by the straight-line method over a certain number of years (10 years in principle) within average remaining years of service for the employees at the time of accrual in each fiscal year, commencing from the following fiscal year after the accrual for each employee, or are charged to income collectively in the following fiscal year after the accrual.

⑥ Accounting for significant hedge

a. Hedge accounting

The Group adopts deferred hedge accounting. However, special treatment is used for qualifying interest rate swap transactions. Moreover, allocation hedge accounting is applied to qualifying currency swap transactions and forward exchange contracts.

b. Hedging instruments and hedged items

Hedging instrument: Currency swaps, interest rate swaps, and forward exchange contracts

Hedged item: Interest on loans payable, receivables and payables denominated in foreign currencies

speculative purposes.

d. Evaluation of hedge effectiveness

Hedge effectiveness is evaluated through comparative analysis of the cumulative fluctuations in the market between the hedged item and the hedging instrument. Evaluation of hedge effectiveness at fiscal year-end is omitted for currency swap transactions, as material conditions for the notional principal of hedging instruments and those for hedged items are the same and these transactions are deemed to offset the market fluctuations. Evaluation of hedge effectiveness at fiscal year-end is omitted also for interest rate swap transactions applied to special treatment.

VI Notes on the Financial Instruments

(1) Matters regarding the current status of financial instruments

The Group's signed an agreement concerning commitment lines with financial institutions, such as securing medium- to long-term fund liquidity with the Company as a holding company, as a safety net for the entire Group. In addition, capital for each business is financed based on the financial plan as needed, through bank borrowing or bond issue applying Cash Management System for the purpose of the efficient utilization of the Group funds. Most funds are invested primarily in low-risk and high-liquidity financial assets, while some are invested in compound financial instruments such as bonds etc. for the purpose of efficiently managing funds. Derivatives are mainly used, not for speculative purposes, but to manage exposure to financial risks as described later.

Credit risks of the clients in terms of notes and accounts receivable - trade are mitigated under the credit management rules, etc. at each Group company.

Short-term investment securities are mainly negotiable certificates of deposit. The Group's credit risk exposure is minimal as these transactions are restricted to highly rated financial institutions in accordance with the capital management rules etc. of each Group company. Investment securities are mainly stocks and the relevant information such as market prices of these stocks and financial conditions of the issuers (business partners) is reviewed and reported to the Board of Directors of each Group company, etc. on a regular basis. Shareholding status is also continually reviewed in view of the relationship with business partners that issue these stocks. With certain compound financial instruments etc., the Group is exposed to risks associated with market price fluctuations etc. in the stock markets but periodically evaluates them on a mark-to-market basis.

Borrowings as well as bonds is intended to secure funds necessary for the purpose of working capital and capital expenditures etc. and diversify means for procuring funds. Each Group company reviews its own actual and projected cash position on a monthly basis, which is eventually verified collectively by the Company as part of the Group's liquidity risk management.

The Group's derivative transactions are restricted to forward exchange contracts and currency swap transactions as hedges against currency fluctuation risks on its foreign currency-denominated operating receivables and debt as well as foreign currency-denominated loans payable, and interest rate swap transactions etc. to mitigate interest rate risks on some of the Group's variable interest rate loans payable. These transactions are executed and managed mainly by the financial department or the accounting department upon obtaining internal approvals in compliance with the derivative transactions management rules, etc. of each Group company. Furthermore, reports on the status of the derivative transactions are made to the Board of Directors at each company as appropriate.

(2) Matters regarding the market value etc. of financial instruments

Consolidated balance sheet amounts and market values of the Group's financial instruments and the difference between the two as of the end of the fiscal year ended March 31, 2018 are as follows. Market values of financial instruments named in Note 2 below are extremely difficult to grasp, thus are not included in the following list.

(*2) Receivables and payables incurred by derivative transactions are presented in net amount.

Notes: 1. Matters regarding the methods to calculate the market values of financial instruments and securities and derivative transactions

(1) Cash and deposits; and (2) Notes and accounts receivable - trade

Of these, items that are settled in the short term (within a year) are recorded using book values, as their market values approximate book values. In addition, of notes and accounts receivable - trade, those which more than a year to the payment date from the end of the fiscal year ended March 31, 2018 are stated at the present values by discounting the amount of claim for each receivable with the interest rate calculated by the payment period and credit risk.

(3) Short-term investment securities and investment securities

The market values of stocks are determined using the quoted price at the stock exchange, and those of debt securities are determined using the quoted price at the stock exchange or the quoted price obtained from the financial institutions. In addition, negotiable certificates of deposit included in available-for-sale securities are recorded using book values, as they are settled in the short term (within a year) and their market values approximate book values.

(4) Notes and accounts payable – trade; (5) Short-term loans payable; and (7) Current portion of bonds

Of these, items that are settled in the short term (within a year) are recorded using book values, as their market values approximate book values. Of the short-term loans payable, market values of the loans hedged by interest rate swap contracts meeting certain conditions are calculated applying the special treatment by combining them with the relevant interest rate swap.

(6) Long-term loans payable; and (8) Bonds payable

These are stated with the present values calculated by discounting the aggregated values of the principal and interest using an assumed interest rate if loans are newly made. Of the long-term loans payable, fair values of the loans hedged by interest rate swap contracts with special treatment applied and by interest rate and currency swap contracts with combined treatment applied (subject to special treatment and allocation hedge accounting) are calculated by combining them with the relevant interest rate swap or interest rate and currency swap.

(9) Derivative transactions

Market values of these are the prices quoted by the counterparty financial institutions.

2. Financial instruments whose market values are not readily determined

Category	Consolidated balance sheet amount (Millions of yen)
Investments in unlisted stocks, etc.	2,599
Investments in investment limited partnerships, etc.	8,661
Stocks of non-consolidated subsidiaries	339
Stocks of affiliates	26,767
Investments in capital of subsidiaries and affiliates	1,601

Items above are not included in “(3) Short-term investment securities and investment securities,” because there is no market price, future cash flows cannot be estimated and it is very difficult to identify market values.
